A small animal with smooth skin and eats insects.

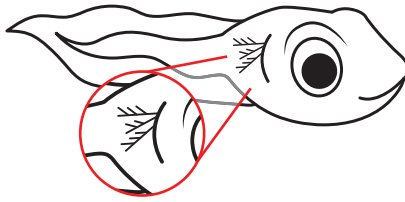

Oval or round objects laid by female animals that start a life cycle.

This is an egg with a developing animal inside.

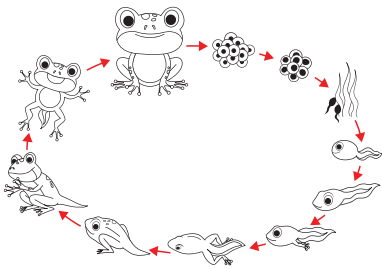

A legless animal living in the water with gills to breathe and no legs.

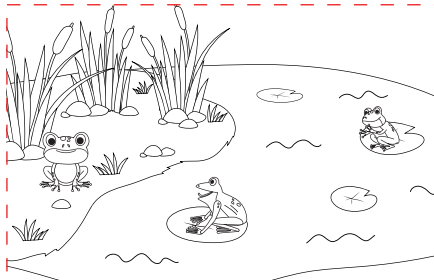

This helps animals breathe under water.

The back part of the tadpole for swimming and food.

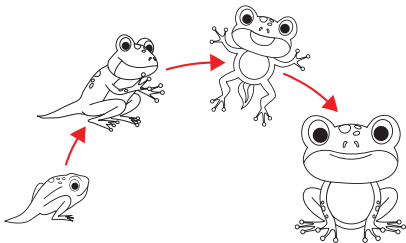

Step of change in the life of a frog.

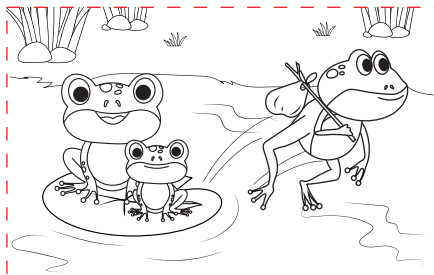

A small area of water where frogs can live.

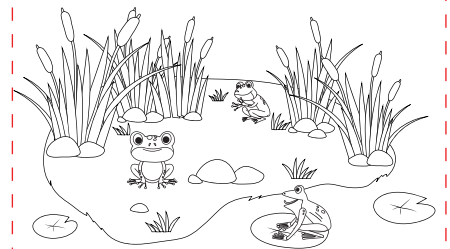

This is how you move through the water.

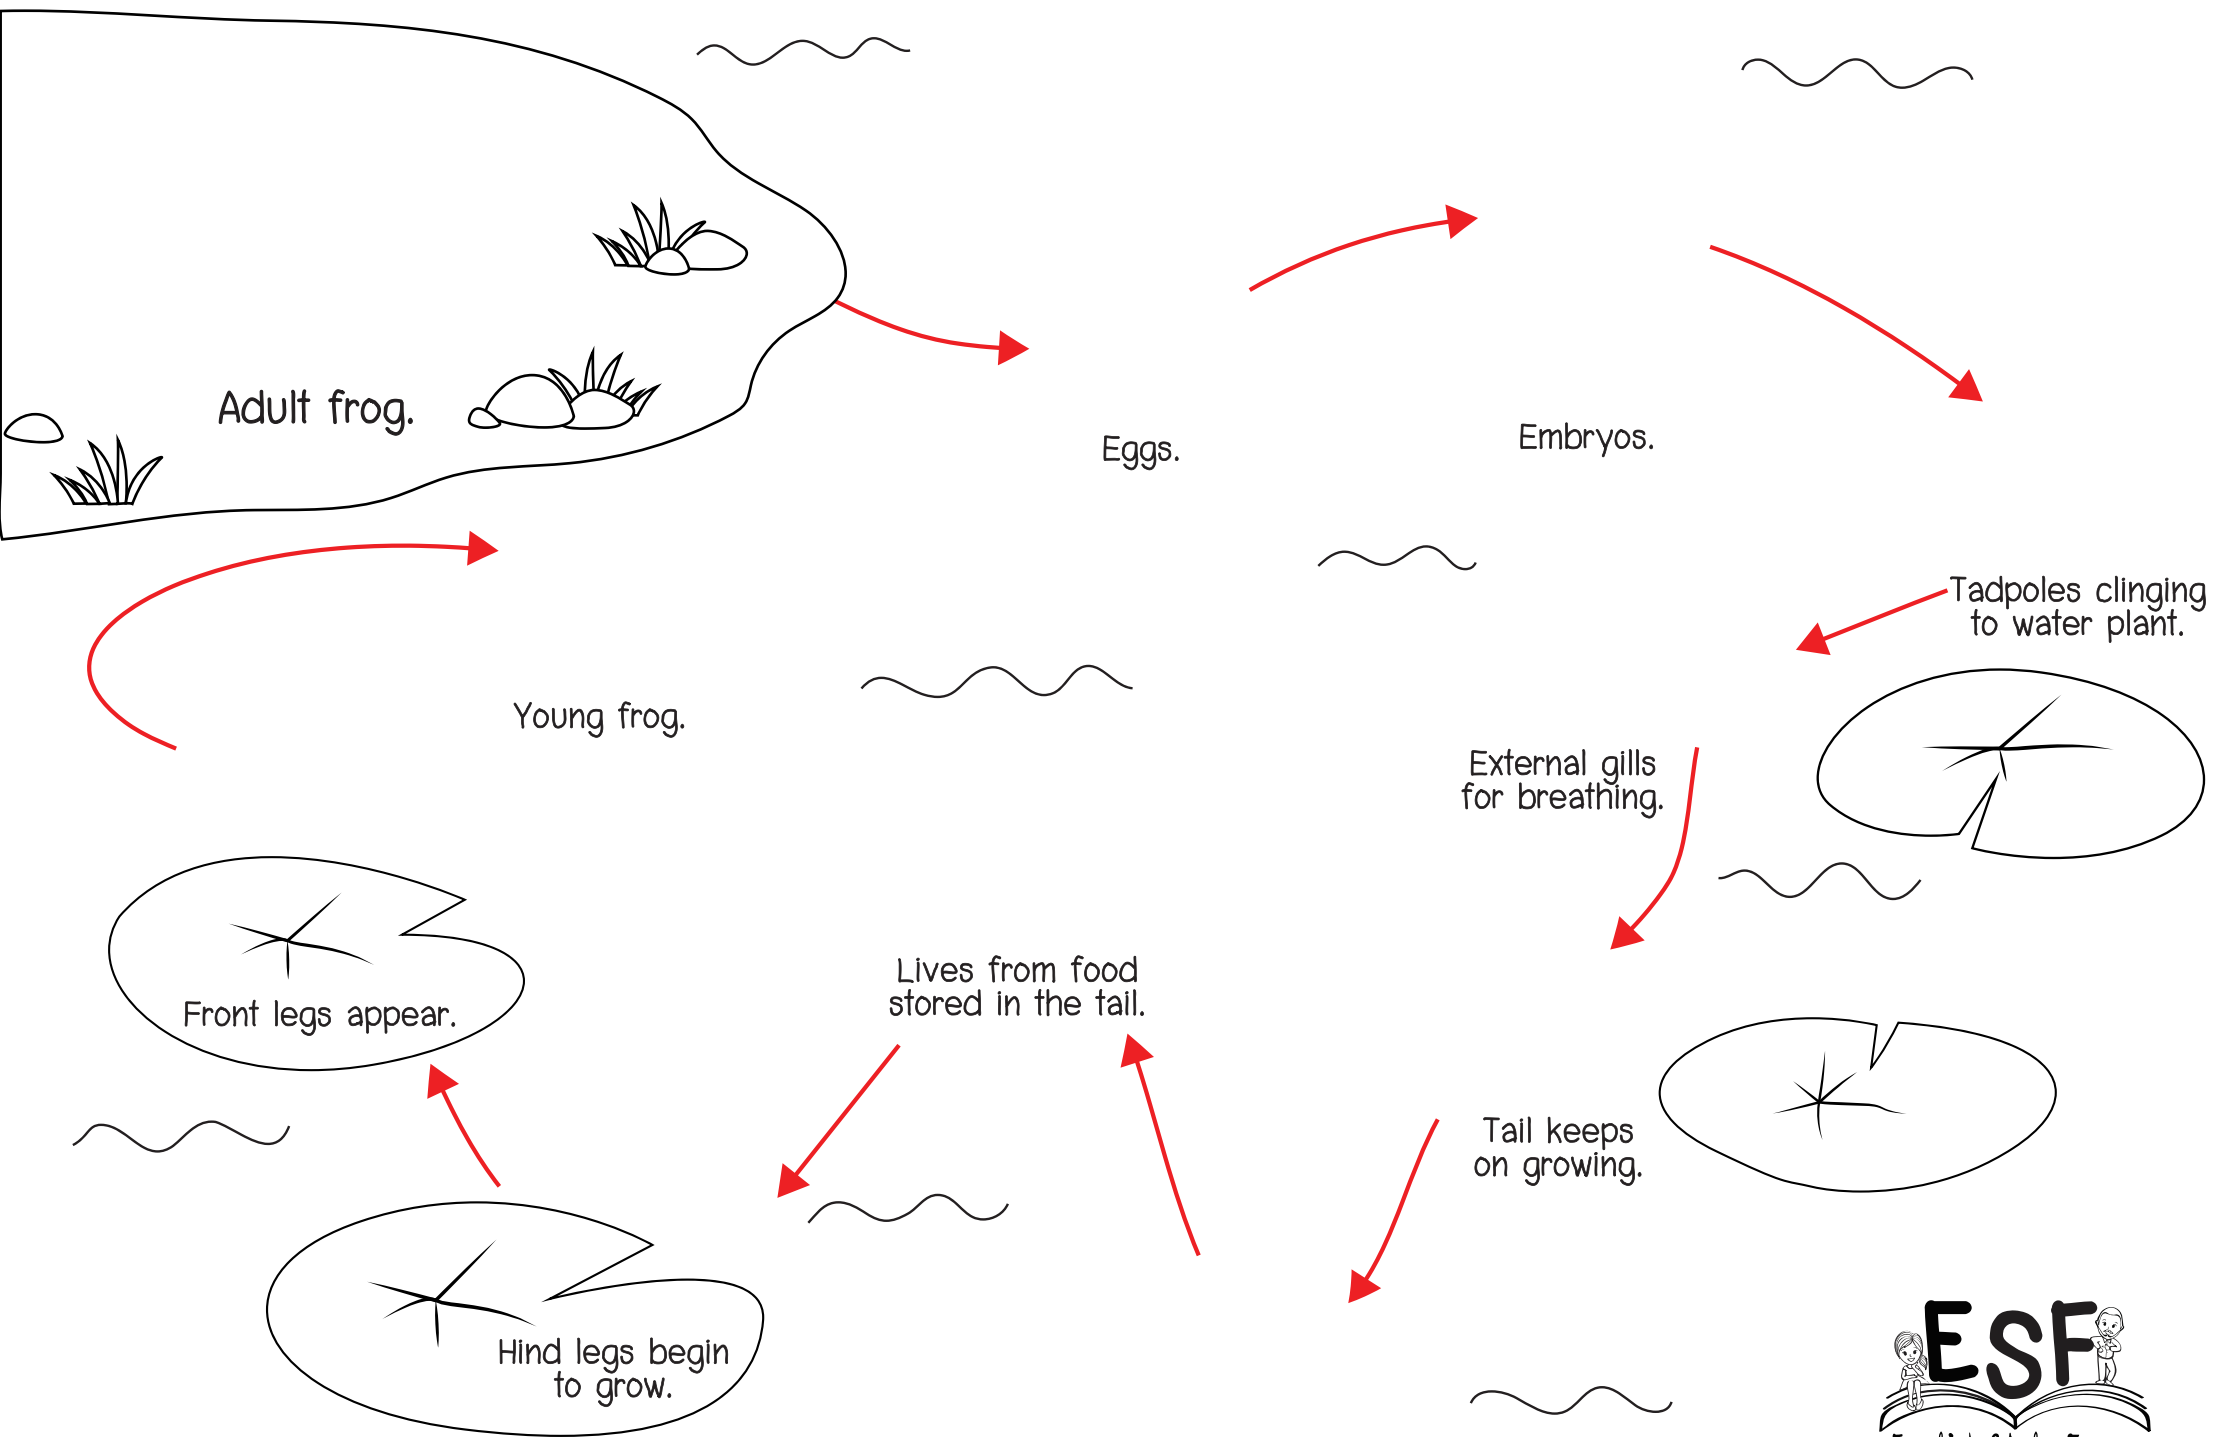

This is what happens when you get bigger and older.

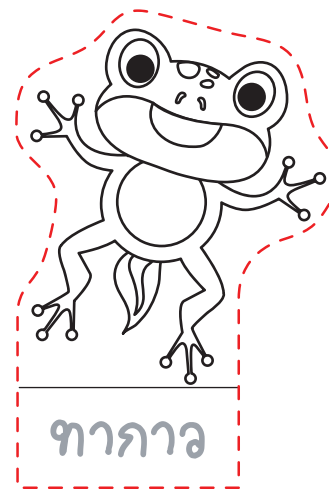

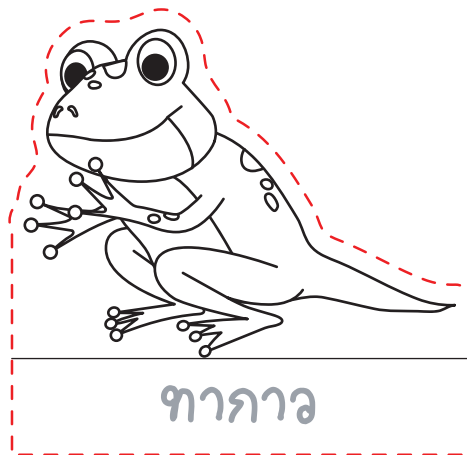

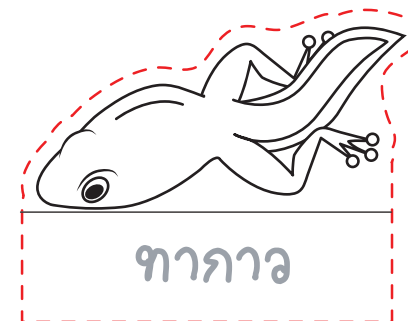

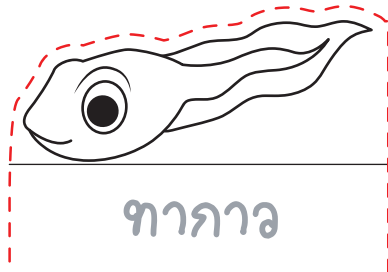

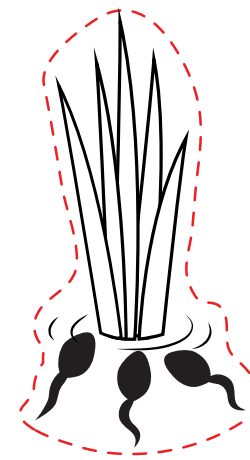

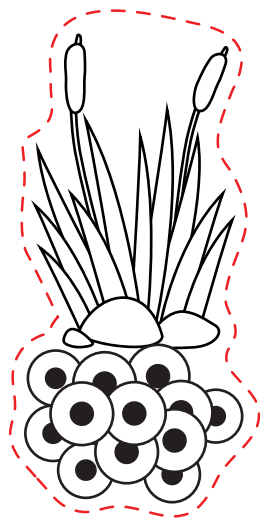

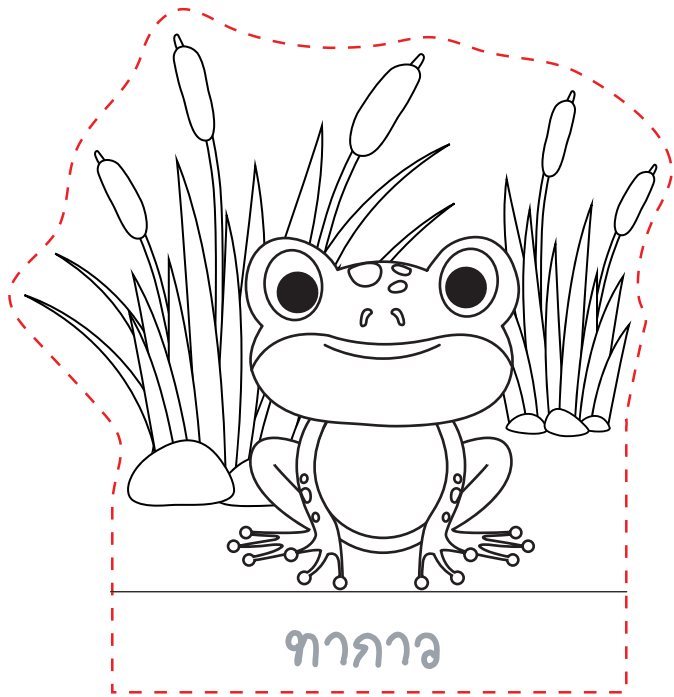

This is the animal family that starts in the water and then can come out when they are adults.

A large area with many trees. The perfect home for many frogs.
