

The human body ร่างกายมนุษย์

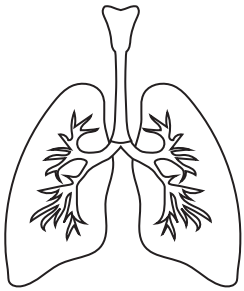

The human body ร่างกายมนุษย์

Brain

The brain is a complex organ that controls thought, memory, emotion, touch, motor skills, vision, breathing, temperature, hunger and every process that regulates our body.

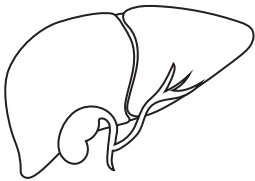

Lungs

The lungs are responsible for removing oxygen from the air we breathe and transferring it to our blood where it can be sent to our cells.

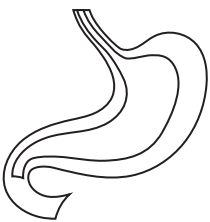

Heart

The heart is responsible for pumping blood throughout our body.

Liver

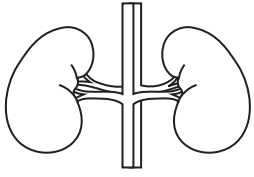

It removes toxins from the body's blood supply, maintains healthy blood sugar levels, regulates blood clotting, and performs hundreds of other vital functions.

Stomach

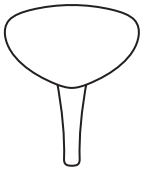

The stomach slowly empties its contents, called chyme, into your small intestine.

The human body ร่างกายมนุษย์

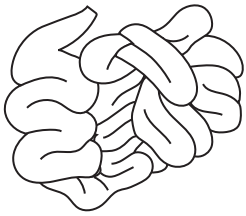

Their main job is to cleanse the blood of toxins and water, and transform the waste into urine.

Kidney

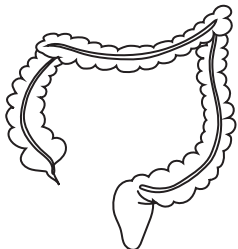

The organ that stores urine.

Bladder

It helps to further digest food coming from the stomach. it absorbs nutrients (vitamins, minerals, carbohydrates, fats, proteins) and water from food so they can be used by the body.

Small intestine

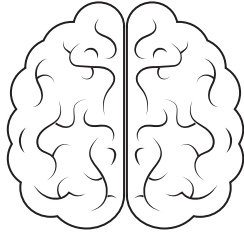

The large intestine turns food waste into stool and passes it from the body when you poop.

B___a___er

___dn___y

Answer the questions

ตอบคำถามให้ถูกต้อง

1. What is the job of our heart

- a) pumping blood b) controls your thought

2. Why do we need our lungs?

- a) digest food b) to breathe

3. Which of the body systems are involved in the removal of waste?

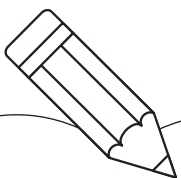

- a) liver b) brain

4. What does the brain do?

- a) detoxing b) controls your thought

5. What is the function of the bladder?

- a) remove toxins from body b) store urine

Answer the questions

ตอบคำถามให้ถูกต้อง

6. How does the kidney system work?

- a) transform the waste into urine. b) remove oxygen

7. Why do we need our small intestine?

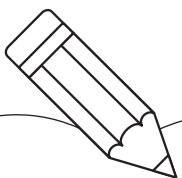

- a) digest food b) breathe

8. what helps you to digest food that you have eaten?

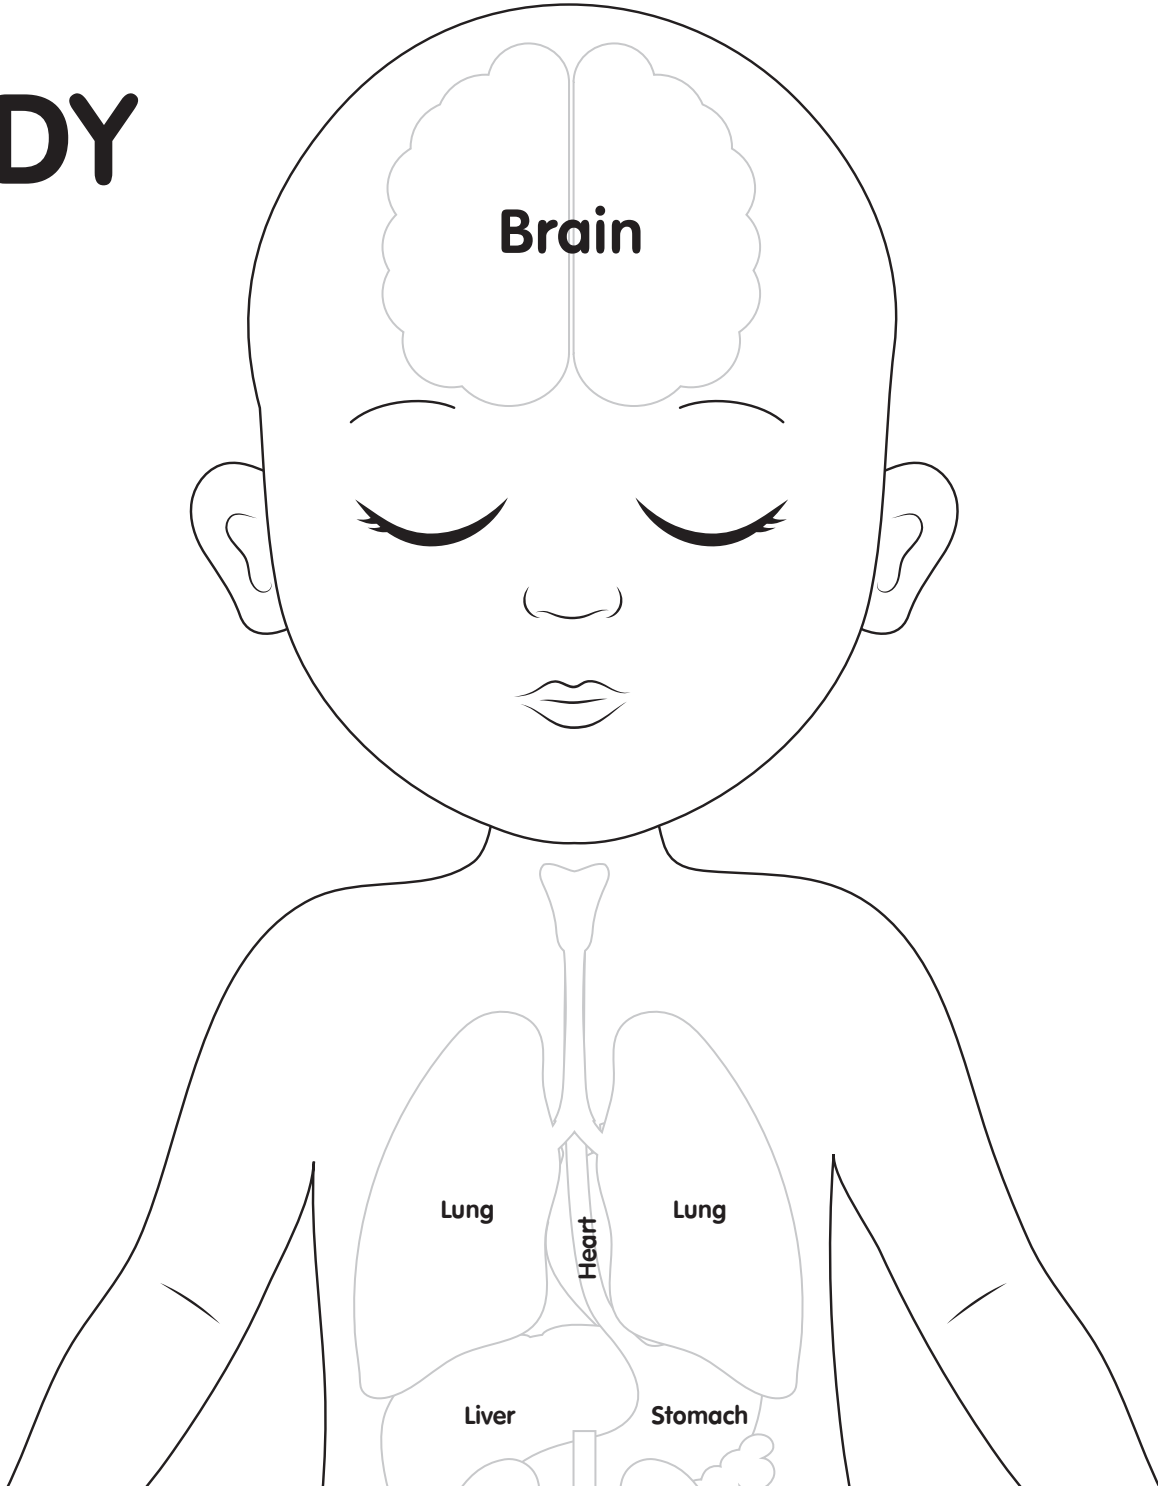

- a) liver b) stomach

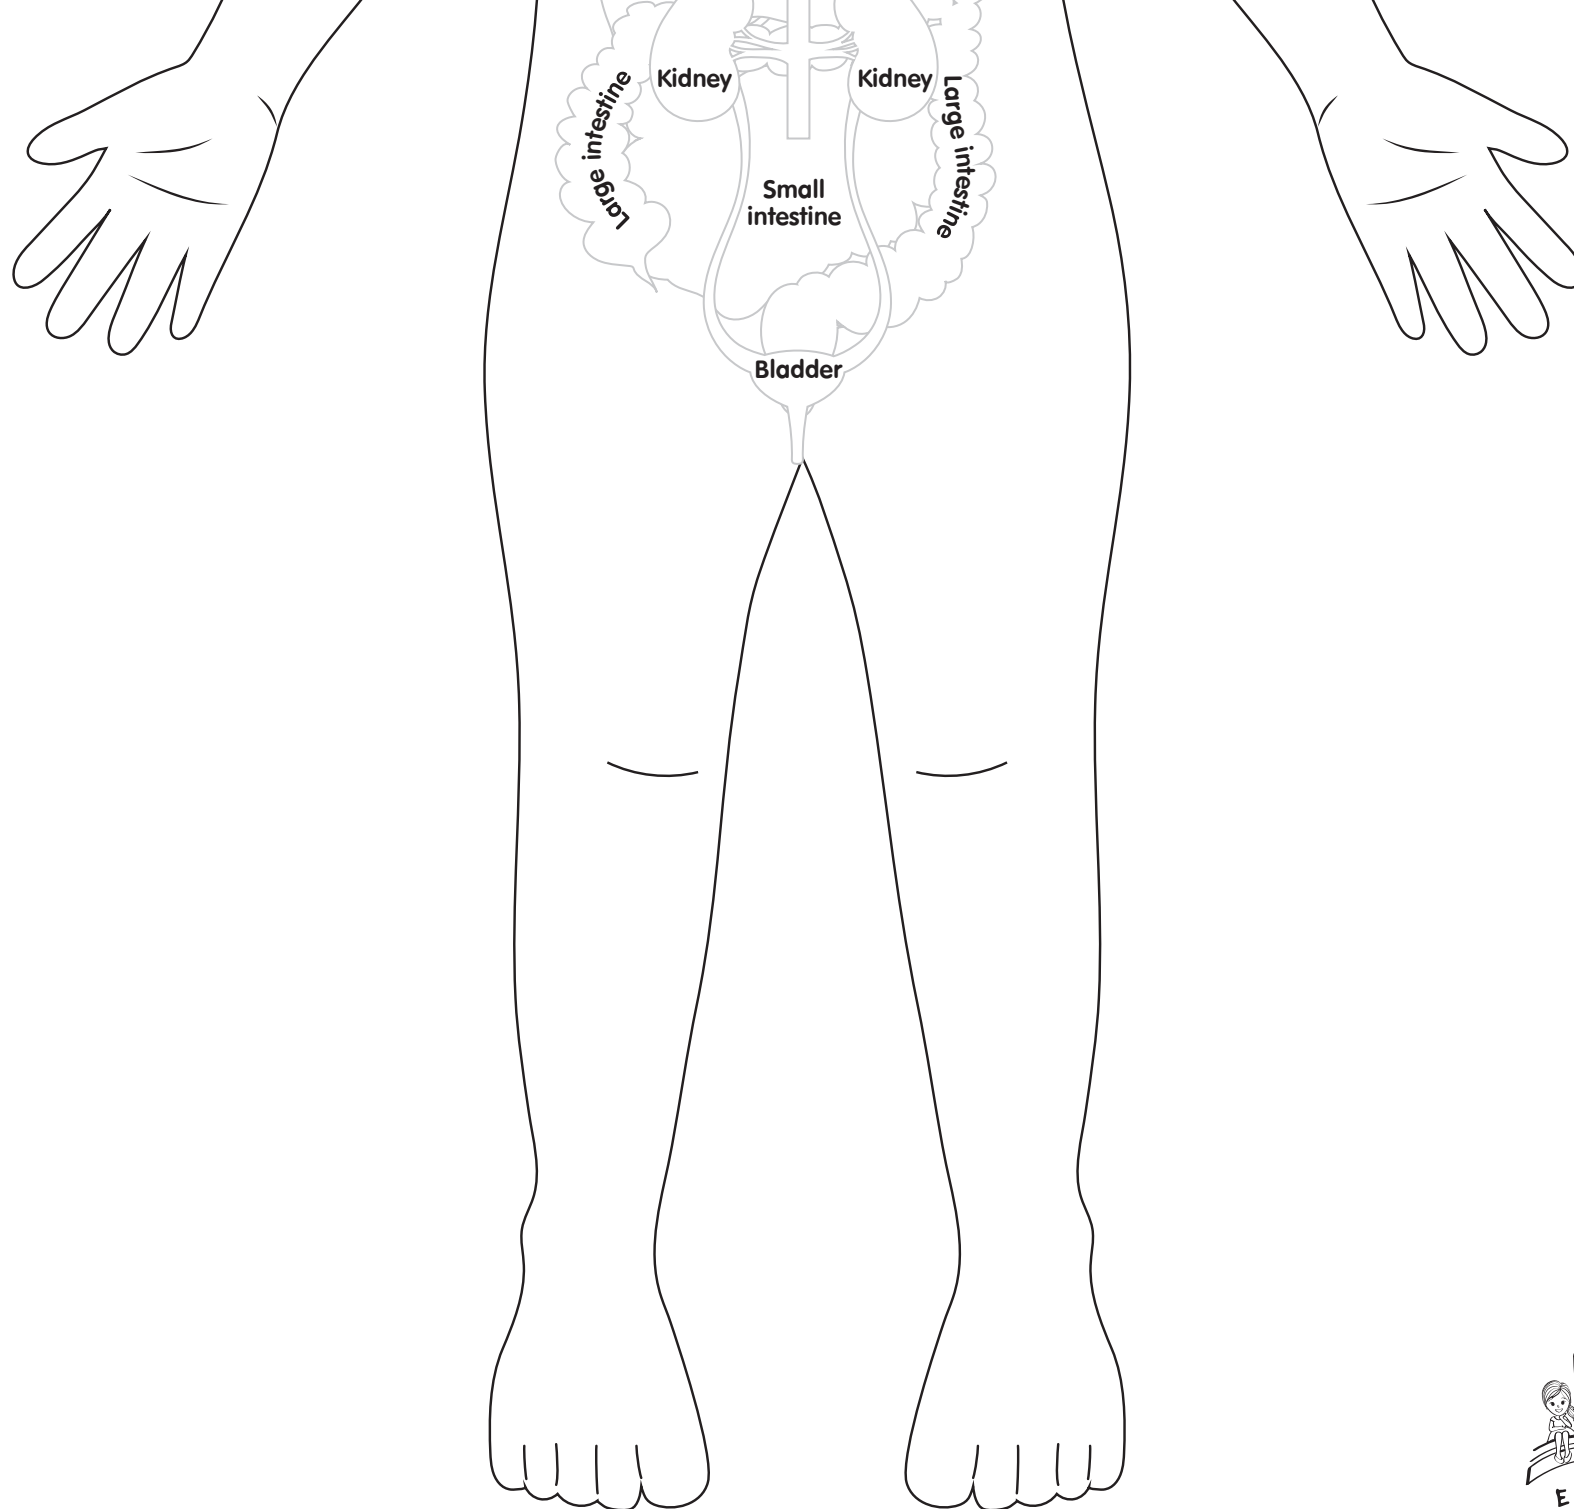

9. What is the last structure to process food?

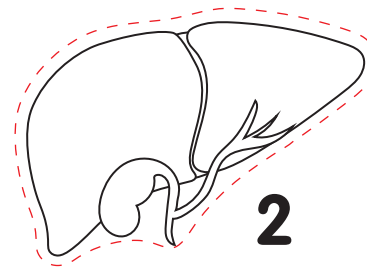

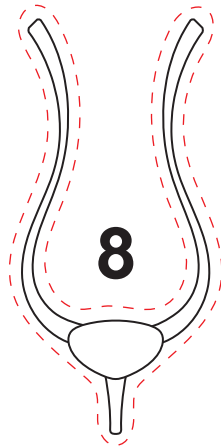

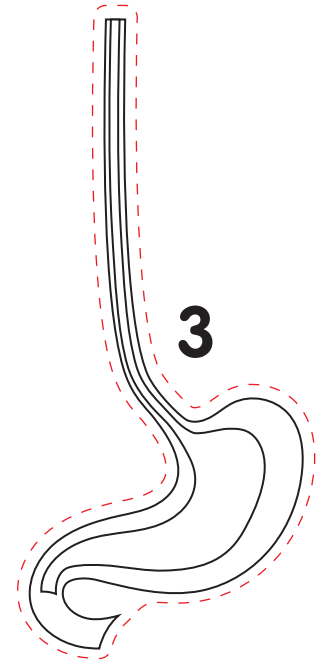

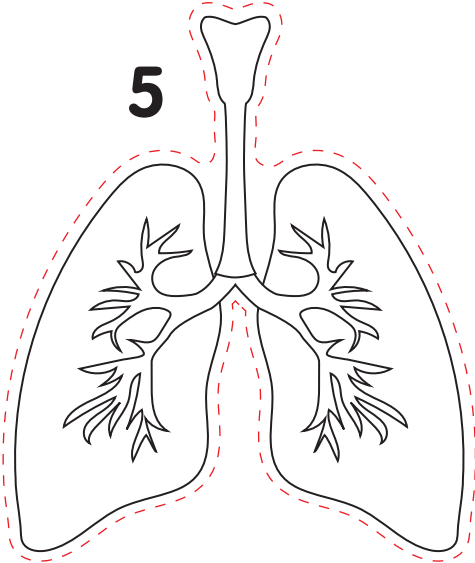

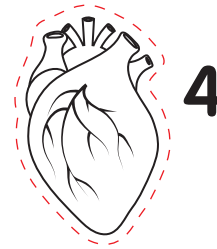

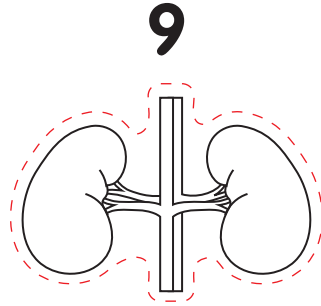

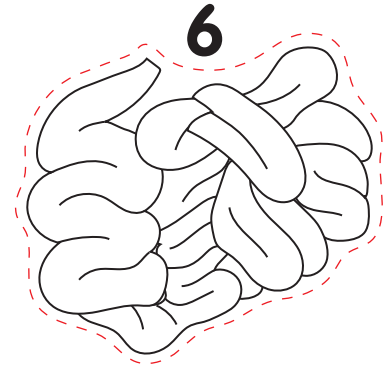

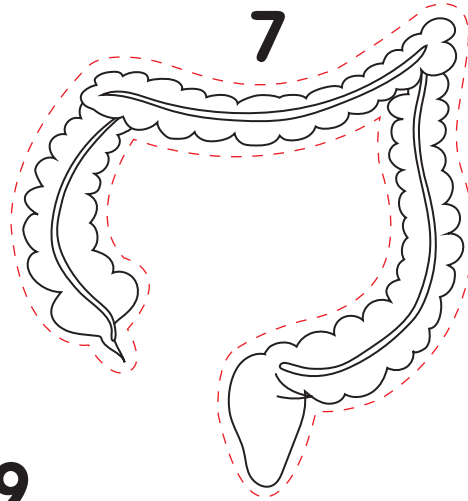

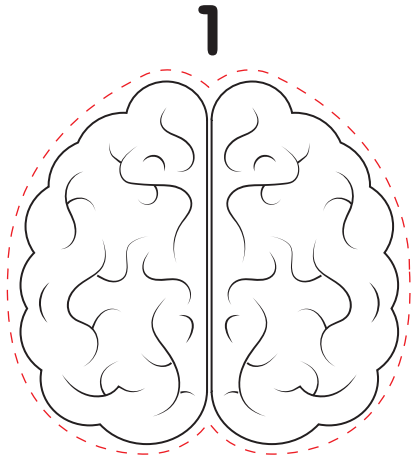

- a) lungs b) large intestine
