# The life cycle of a carrot

## วงจรชีวิตของแครอท

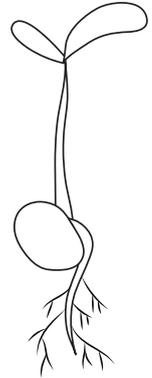

**Tiny carrot seeds are planted in the soil.**

**They need water, sunlight, and warmth to start growing.**

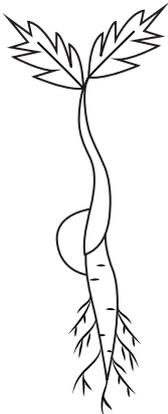

**The seed begins sprout underground.**

**A small root grows downward, and a tiny green shoot appears above the soil.**

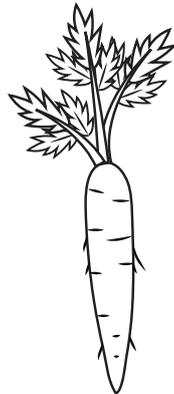

**The first real leaves grow, replacing the baby leaves.**

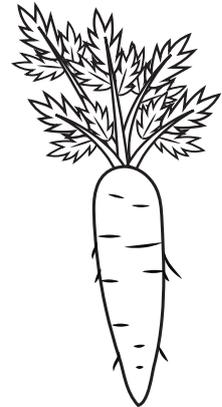

**The root starts getting longer and stronger.**

**The leafy top gets bigger, and the carrot root thickens. The plant absorbs nutrients from the soil to help it grow.**

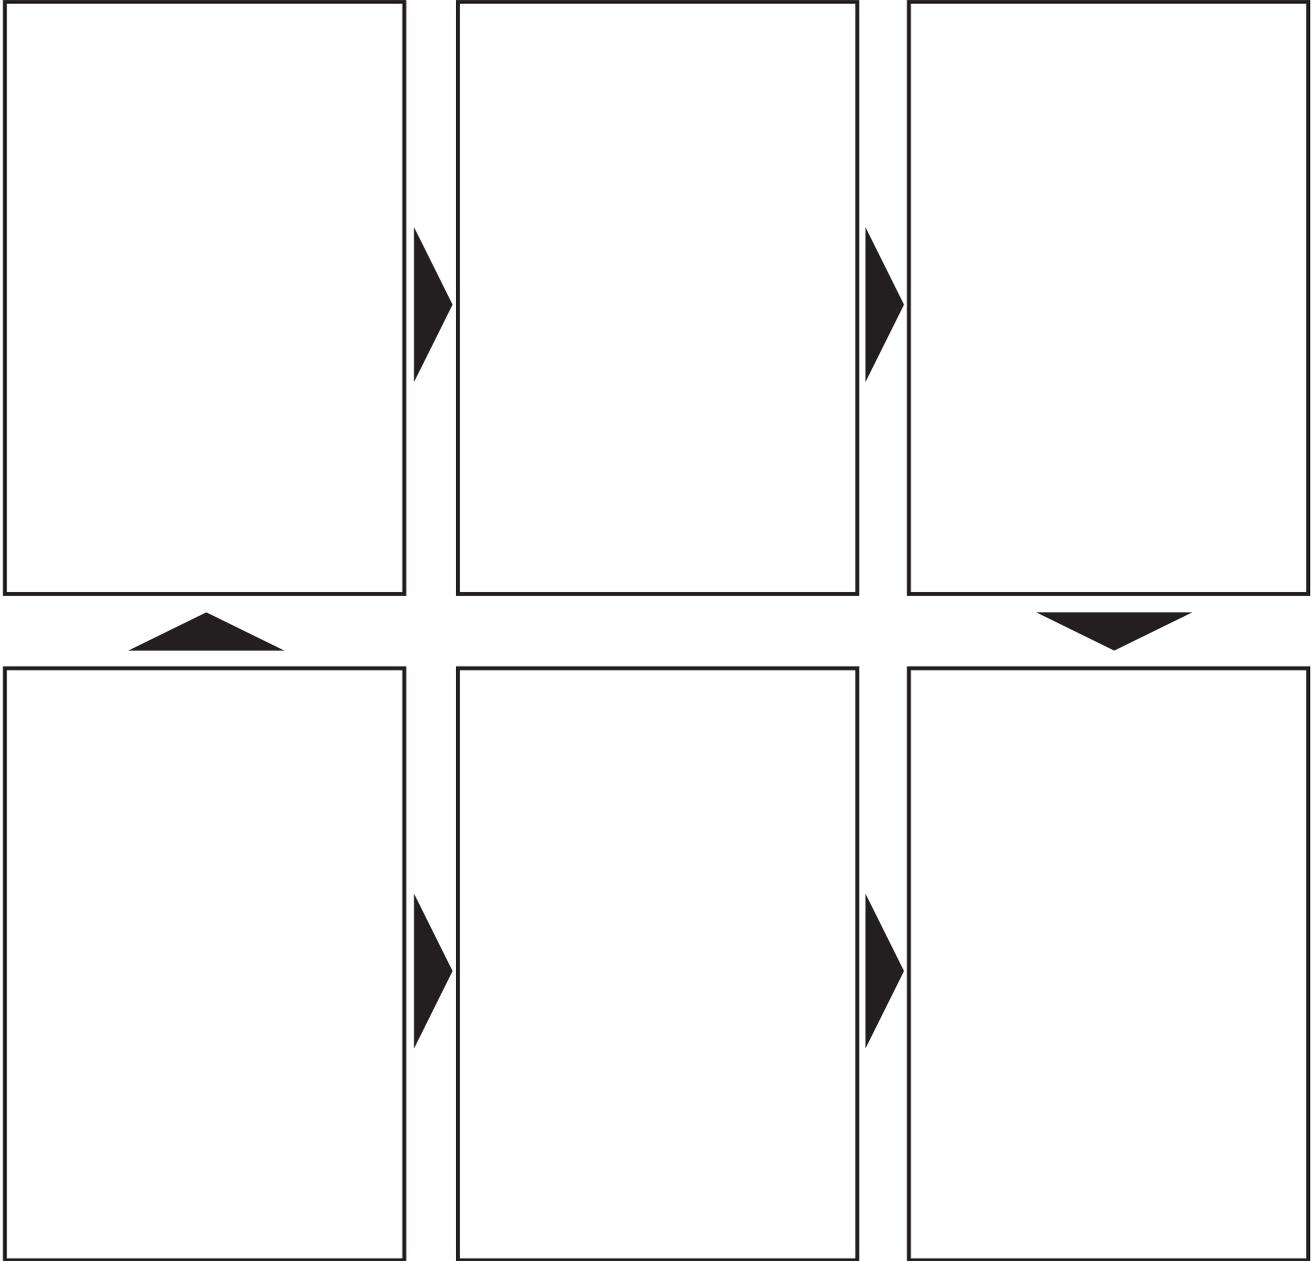

**The orange carrot root is fully shaped but still growing. It needs more time to get bigger and sweeter.**

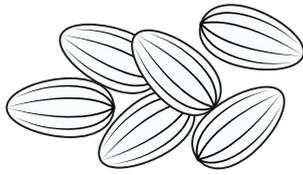

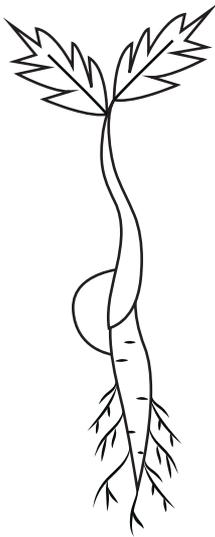

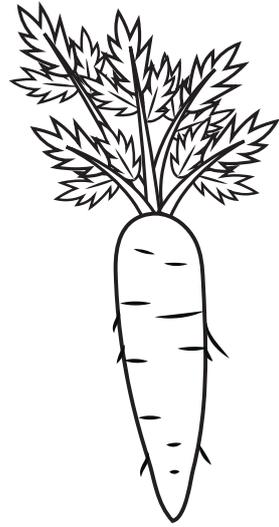

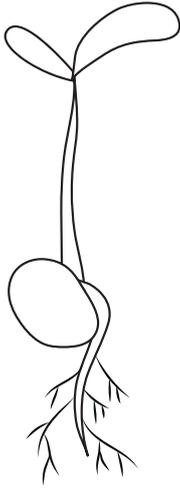

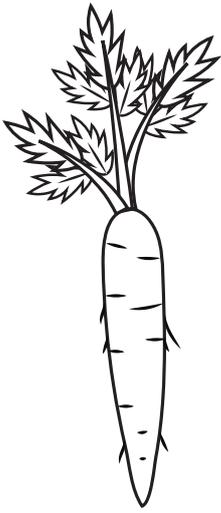

**The carrot is now fully grown and ready to be harvested! If left in the ground, it will grow flowers and produce seeds for the next cycle.**
